MITRE ATT&CK MAPPING

T1498 — Network Denial of Service Impact

TACTIC: Impact

Adversaries may perform network denial of service (DoS) attacks to degrade or block availability of targeted resources, often using compromised IoT devices as part of a botnet (e.g., Mirai-style attacks).

Recommended Actions

- Isolate device from network immediately
- Notify upstream ISP/security team if outbound flood is confirmed
- Check device for signs of botnet malware and reflash firmware
